Individual Report

Now that you have designed your building and network, assigned all IP addresses to hosts, it is time to report all your work, and reflect upon them. In this task there are 2 important things to complete: a group report, an individual report. The objective of the report is to report the work done and reflect upon how it can be made better. For this task you are asked to write an individual report. To complete the task, you are advised to expand it to give a clearer view of your work, your suggestions, and your reflections.

Task - Making an Individual Report

This report is individual and unique. It MUST be your own individual point of view. It does not need to be submitted together with the group report, but you must submit it. You must describe your contributions in the project work, as well the contributions of others in your team. Be honest. This is where your integrity comes in.

The report is 2 pages long (maximum). The report must include the following:

• Your group name.

• Detail your contribution to the group and the project work

• Detail the other members contribution to the group and the project work

• Explain how you work as a group.

• Explain what you have learned from working as a group.

• Explain what you have learned from doing the project.

• Your comments and suggestions on the project.

• A reflection on every task you did within the project. Reflection here means:

what you learned (in subject matter and life experiences), how the project helps you with the subject matter.
